Design Template Usage

All templates are built in Adobe Illustrator at 1/20th scale. To re-size the vehicle template for design purposes, simply use the design program's built-in function and re-scale by 2000%. Once files have been re-scaled, we recommend using Adobe Illustrator or Adobe Photoshop (or a program with similar design features). For best quality, all files being placed or used in the design program should be either 1/4 scale at 300 dpi or at full scale at 100 dpi. All text should always be converted to curves or outlines depending on the software being used and the color space should CMYK. File formats accepted for final output are .eps, .pdf, .tif, or .psd.
